PHP 8.2.0 Beta 3 available for testing »

18 Aug 2022

The PHP team is pleased to announce the third beta release of PHP 8.2.0, Beta 3. This continues the PHP 8.2 release cycle, the rough outline of which is specified in the [PHP Wiki](#).

For source downloads of PHP 8.2.0 Beta 3 please visit the [download page](#).

Please carefully test this version and report any issues found in the [bug reporting system](#).

Please DO NOT use this version in production, it is an early test version.

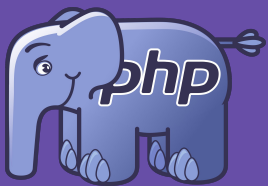

Upcoming conferences

- International PHP Conference Munich 2022
- SymfonyWorld Online 2022 Winter Edition
- SymfonyCon Disneyland Paris 2022
- CakeFest 2022: The Official CakePHP Conference

The PECL extension [release](#) and [snapshot](#) build directories are browsable directly.

Which version do I choose?

IIS

If you are using PHP as FastCGI with IIS you should use the Non-Thread Safe (NTS) versions of PHP.

Apache

Please use the Apache builds provided by [Apache Lounge](#). They provide VC15 and VS16 builds of Apache for x86 and x64. We use their binaries to build the Apache SAPIs.

With Apache, using the apache2handler SAPI, you have to use the Thread Safe (TS) versions of PHP.

VC15 & VS16

More recent versions of PHP are built with VC15 or VS16 (Visual Studio 2017 or 2019 compiler respectively) and include improvements in performance and stability.

- The VC15 and VS16 builds require to have the *Visual C++ Redistributable for Visual Studio 2015-2019* [x64](#) or [x86](#) installed

Instalando o PHP

_passo 4:

1. Descompactar o arquivo .zip no diretório desejado.

2. Entrar no diretório e copiar o caminho.

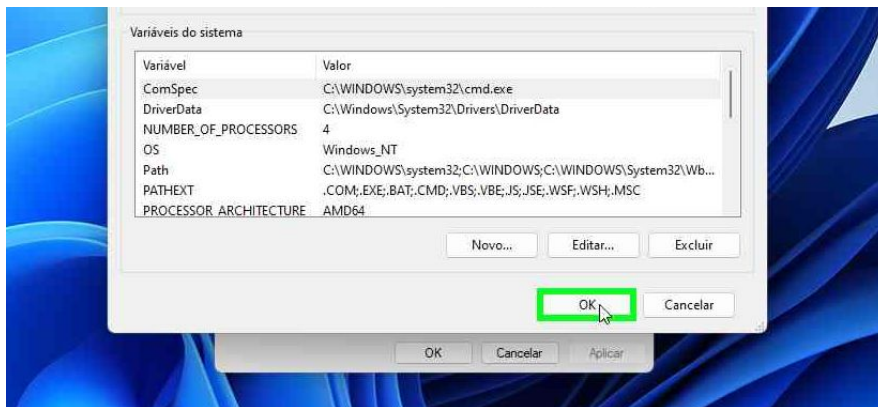

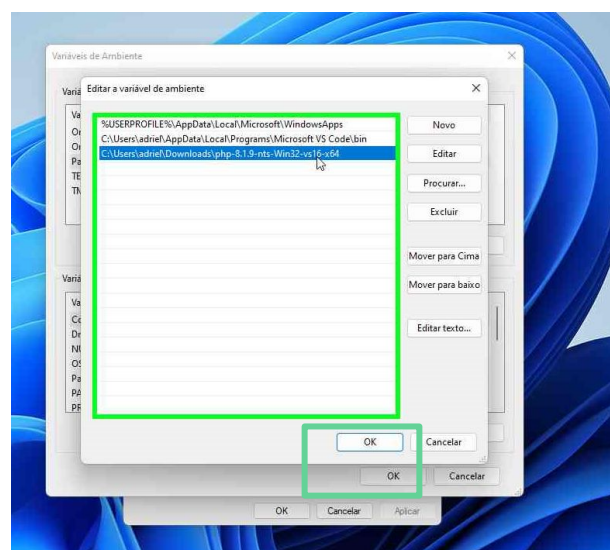

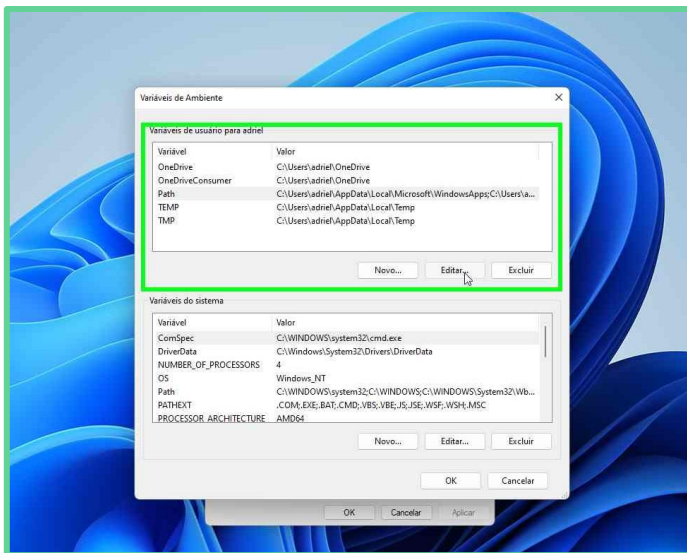

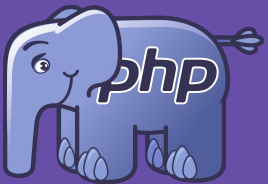

Instalando o PHP

_passo 5:

1. Pesquisar por “Variáveis de ambiente”.
2. Selecionar “Path” e clicar em editar.
3. Adicionar o caminho do diretório onde o PHP pode ser encontrado.
4. Clicar em OK.

Instalando o PHP

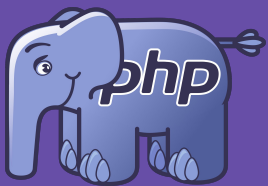

_passo 6:

1. Abra o CMD ou outro terminal no Windows.
2. Digite o seguinte comando: "php -v"
3. A saída deverá ser similar ao exibido na imagem.

```
Prompt de Comando
Microsoft Windows [versão 10.0.22000.856]
(c) Microsoft Corporation. Todos os direitos reservados.

C:\Users\adriel>php -v
PHP 8.1.9 (cli) (built: Aug 2 2022 14:17:33) (NTS Visual C++ 2019 x64)
Copyright (c) The PHP Group
Zend Engine v4.1.9, Copyright (c) Zend Technologies

C:\Users\adriel>
```

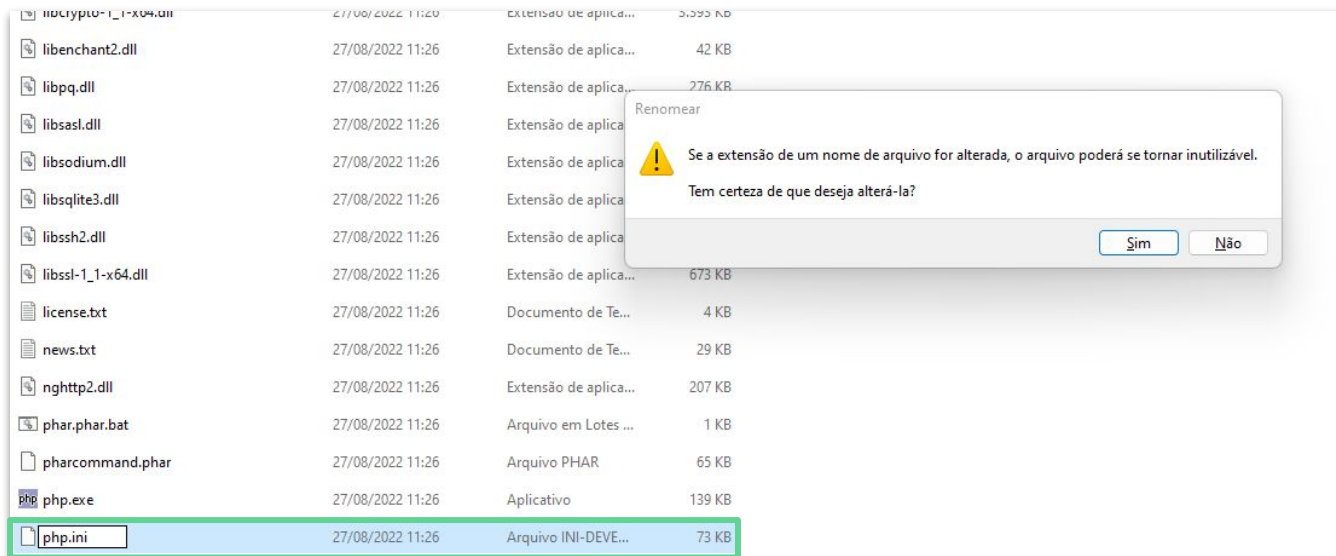

Instalando o PHP

_passo 7:

Volte ao diretório onde está o PHP e renomeie o arquivo “php.ini-development” para “php.ini”.

Em seguida, confirme a alteração.

Pronto!

Agora divirta-se criando seus programas em
PHP. :)

A screenshot of the official PHP website (php.net). The page has a dark blue header with navigation links: "php", "Downloads", "Documentation", "Get Involved", "Help", and "php2". A search bar is on the right. The main content area features the large "php" logo, a description of PHP as a "popular general-purpose scripting language", and two buttons: "What's new in 8.1" and "Download". Below these are links for "8.1.9 - Changelog - Upgrading", "8.0.22 - Changelog - Upgrading", and "7.4.30 - Changelog - Upgrading". A central white box contains a news item titled "PHP 8.2.0 Beta 3 available for testing »" dated "18 Aug 2022". The text in the box states that the PHP team is announcing the third beta release of PHP 8.2.0, Beta 3, and provides links for source downloads, bug reporting, and upgrading notes. On the right side, there are sections for "Upcoming conferences" (listing International PHP Conference Munich 2022, SymfonyWorld Online 2022 Winter Edition, and CakeFest 2022), "User Group Events", "Special Thanks", and "Social media" (with a link to @official_php).
